

AI BRAIN TUMOR DETECTION CENTER

Report ID: a6ee96f3-2437-4e9c-b1f2-389296548b5a
Date: 2026-06-15 14:50:40.779802

Patient Name	harsha
Age	32
Email	hurispp
Tumor Type	meningioma
Confidence	78.06%

AI SUMMARY

The AI analysis indicates a Tumor Type: **meningioma** with a Confidence: **78.06%**. 1. **Tumor explanation:** A meningioma is a common type of primary brain tumor that typically arises from the meninges, the protective membranes surrounding the brain and spinal cord. They are usually slow-growing and often benign (non-cancerous). 2. **Possible symptoms:** Symptoms can vary based on the tumor's size and location. They may include headaches, seizures, vision or hearing changes, weakness or numbness on one side of the body, and cognitive alterations. 3. **Clinical recommendations:** Given these findings, clinical correlation with the patient's medical history and neurological examination is essential. A neurosurgical consultation is recommended for further evaluation, discussion of management options (e.g., observation, surgical resection, radiation therapy), and definitive diagnosis. 4. **Patient-friendly summary:** The AI suggests there's a good chance this is a meningioma, which is typically a slow-growing, non-cancerous growth on the brain's outer covering. Symptoms can vary but might include headaches or seizures. Please discuss these findings with your doctor, who will guide you on the next steps, possibly involving a brain specialist.

Probability Distribution

Class	Probability (%)
glioma	20.83
meningioma	78.06
pituitary	0.0
no_tumor	1.11
